

PP Spreadsheet Guide

Subpages Within Spreadsheet

Subpage Category	Function	Image
Status Page	Summary of what has been completed/needs to be completed Contains the link to the Jira Epic used to communicate completion of post processing of material to SW, and a place to record any issues found during post processing	 The screenshot shows the 'Status Page' of the PP Spreadsheet. It features a Jira Epic link at the top: Jira Epic for Post Processing. Below this, there are three main data tables: Total Scans: A table with columns for Total Scans, % Post Processed, % Reviewed, and % Uploaded. The values are: Total Scans: 36910, % Post Processed: 29.67, % Reviewed: 17.86, % Uploaded: 19.37. TP Data: A table with columns for Material, Total Scans, % Post Processed, % Reviewed, % Uploaded, Spec Distribution Checked, and Via Distribution Checked. It lists various materials like pork, thmplate, thmplate-2, thmplate-3, wood, cardboard, thmplate-4, thmplate-5, metal-al, and polypropylene. Timed Data: A table with columns for Material, Total Scans, % Post Processed, % Reviewed, % Uploaded, Spec Distribution Checked, and Via Distribution Checked. It lists materials like all, bell-dirty, bell-clean, thmplate-bell-dirty, and thmplate-bell-clean.
Date Page	Contains all the scans to be post-processed for an individual day Can either be TP Data (True positive data) or Timed Data - TP data follows the instructions for data that needs to be annotated or ROI'd - Timed data follows the instructions for data that either needs to be corrected or corrected and ROI'd	 The screenshot shows the 'Date Page' of the PP Spreadsheet. It features two tabs: 'February 02 - Timed Data' and 'February 02 - TP Data'.
All Data	Contains all the scans to be post-processed - this is pulled from the Data Collection Spreadsheet - Can either be TP Data (True positive data) or Timed Data - It should be hidden by a DC or PP lead to not cause confusion	

All Post-Processed	Contains a query over the entire spreadsheet that pulls all post processed data (each date) into one sheet to allow for calculations and tracking on the status page Can either be TP Data (True positive data) or Timed Data - The DC or PP lead must update the query with new date tabs as they get added - It should be hidden by a DC or PP lead to not cause confusion	
Dropdown Options	Contains the variables that are used to in the automation for creating different tabs on the post processing spreadsheet - Should only be edited by the DC lead - It should be hidden by a DC or PP lead to not cause confusion	

Date Page

Column Header	Description
DM	What DM the scan was on (specific DM serial ID)
Type	Type of data collected (train,t3st)
Mat	What material was scanned
Time	What time the scan occurred at
ScanID	Specific ID associated with each scan. Varies for DM.
Format	Type of FO placed on the meat/background(target,loose,thinplas)
Density	Specific density of the scan (a,b,c,boat)

Bg	What meat/background the FO was placed on
D0	Size of the FO (mm * 10)
Amount of FO	Amount of FOs in the scan
Lane	What lane the scan was run in
Computer	The computer that should be used to post-process the scan
DM ID	The ID of the DM the scan was run in
Camera number VIS	Serial number of the VIS camera in the DM
Camera number SPEC	Serial number of the SPEC camera in the DM
VIS/SPEC PP	Checkbox indicating completion of annotation/ROI
VIS/SPEC REV	Checkbox indicating completion of review of annotation/ROI
VIS/SPEC UPLOAD	Checkbox indicating completion of upload to server of annotation/ROI
PPer/REVer/UPLOADER	Dropdown for name of person completing specific task

Steps for using the Date Page for post-processing:

1. Identify what has not been completed using the VIS/SPEC PP column. Unchecked boxes indicate that scan has not been post-processed.
 - a. Check the PPer column to see if anyone is in progress of post-processing that scan.
2. Select the group of scans you wish to post-process.
 - a. Use the PPer column to select your name for that specific set of scans.
3. Once you have finished post-processing, mark the checkboxes for the scans you have completed.
4. If a given scan cannot be post processed for any reason, make a note in the comments column
5. Post-processed files and the .txt file will be save to S3 bucket for anyone to access.

Steps for using the Date Page for reviewing:

1. Identify what has been post-processed using the VIS/SPEC PP column.

- a. Within the data that has been post-processed, identify the scans that have not been reviewed using the VIS/SPEC REV column.
2. Select the group of scans you wish to review.
 - a. Use the REVer column to select your name for that specific set of scans.
3. Once you have finished reviewing, mark the checkboxes for the scans you have completed.

Steps for using the Date Page for uploading:

1. Identify what has been reviewed using the VIS/SPEC REV column.
 - a. Within the data that has been reviewed, identify the scans that have not been uploaded using the VIS/SPEC UPLOAD column.
2. Select the group of scans you wish to upload.
 - a. Use the UPLOADER column to select your name for that specific set of scans.
3. Once you have finished uploading, mark the checkboxes for the scans you have completed.
