

Post Processing Quality Reminders

Example 1: Missing FO

The middle annotation (seen below from an extract screenshot) does not contain a FO

Vis Extract	Spec Extract
	

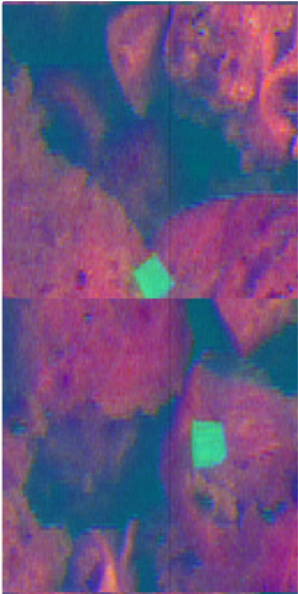

Correct FOs + 1 missing FO

Example 2: Cut Off FO

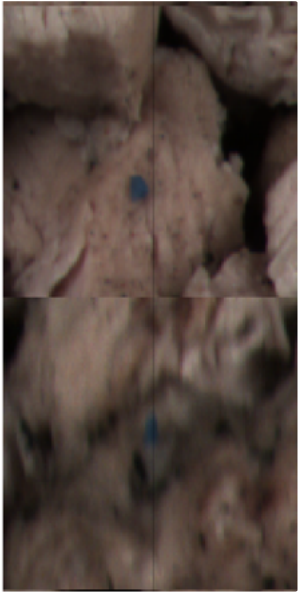

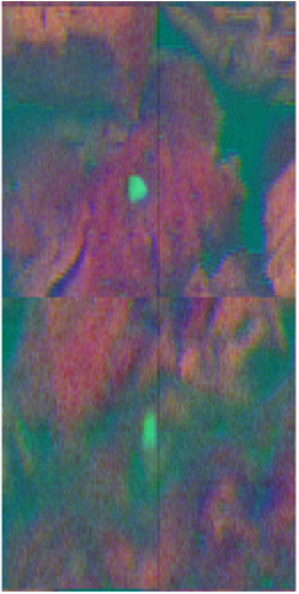

The top annotation has an FO that has been cut off (see bottom annotation for comparison)

Vis Extract	Spec Extract
-------------	--------------

---	--

Example 3: FO tilted (not the right size) - bottom one

The bottom annotation has an FO that has been tilted, it has a smaller surface area than it should for its expected size (see top annotation for comparison)

Vis Extract	Spec Extract
	

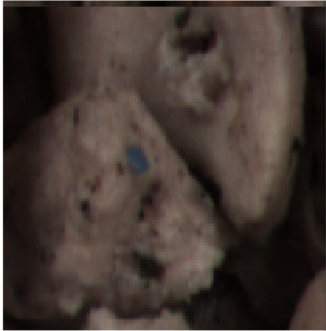

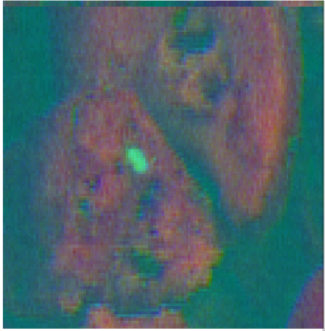

Example 4: FO in crevice

Example 5: O-ring in Extract Box

Example 6: Double FO in Extract Box

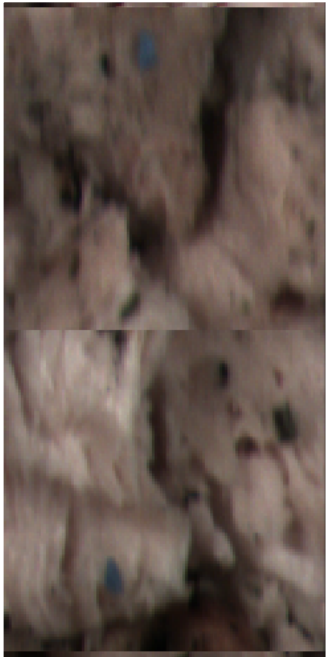

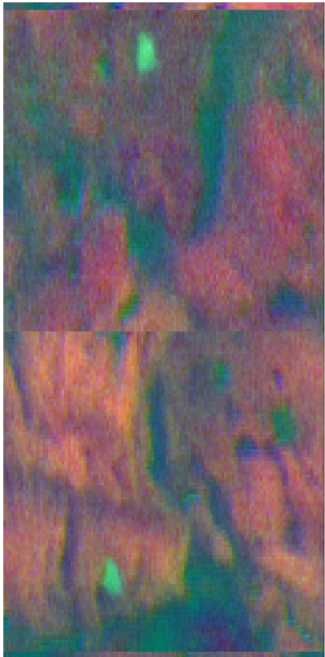

Section 1B: Acceptable Annotations

Example 1: FO in the center of the Extract Box

Vis Extract	Spec Extract
	

This is an example of an ideal annotation, the FO has the correct surface area and is centered in the extract

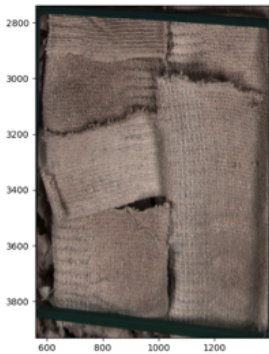

Example 2: FOs in the Extract Box but not centered

Vis Extract	Spec Extract
	

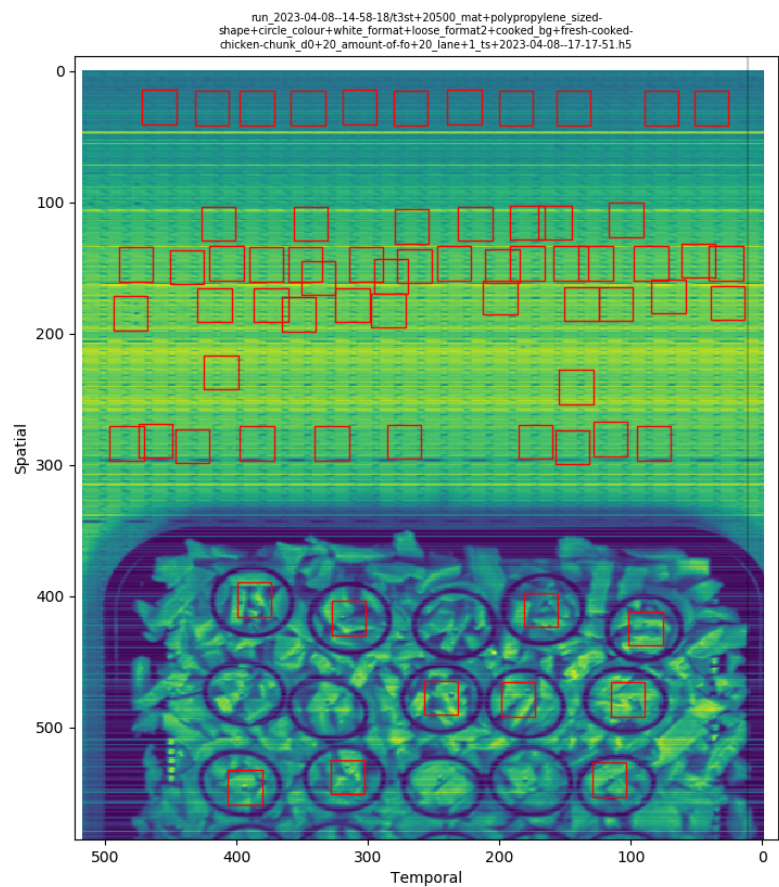

These are examples of acceptable annotations, the FO has the correct surface area and is in the extract region (not being centered is still acceptable as long as the FO is not cut off)

Section 2A: ROI Mistakes

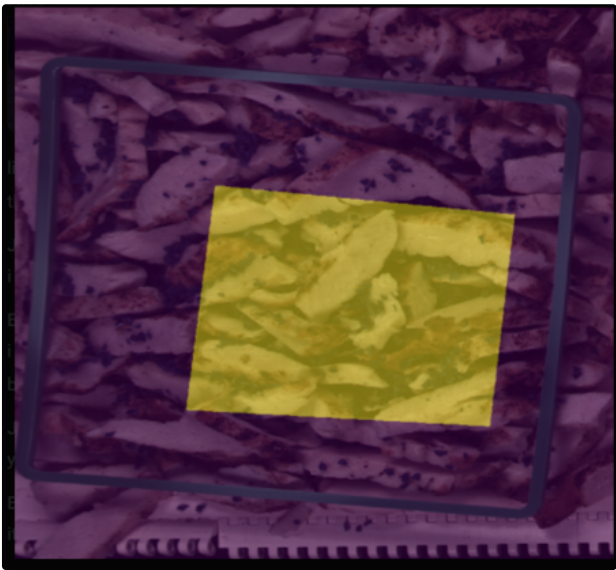

Example 1: Belt in ROIs

Example 2: Forgot to use the “--ac” tag for spec annotations

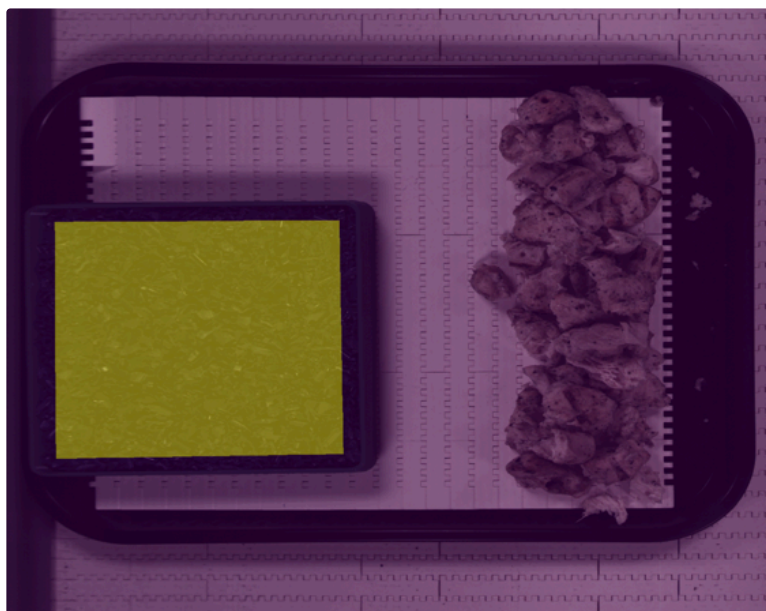

Example 3: Not enough data being ROI's

In theory this ROI is correct but the clearance between the ROI box (yellow box) and ROI square (green square) is too large and we are losing data by not ROI-ing this section

Section 2B: Acceptable ROIs

Example 1: Acceptable Boat ROI

Example 2: Acceptable Density ROI
